Abstract

The present invention relates to a pharmaceutical composition having antitumor activity and comprising Pulsatillae Radix and/or Ulmaceae cortex, and more particularly the composition may be prepared by extracting powdered Pulsatilla Radix and/or powdered Ulmaceae cortex, and optionally one ore more ingredients selected from powdered Ginseng Radix and Glycyrrhizae Radix in a solvent at the temperature of below 60°C, filtering and lyophilizing the extract, or admixing the above extracted solution with conventional auxiliaries, then filtering and lyophilizing the resulting mixture, and then formulating the lyophilized powder thus obtained to a pharmaceutical preparation by a conventional method used in the pharmaceutics.

The present antitumor composition is stable and maintains efficacy 15 even if it is preserved for several years.
